

# ComIT

## **Final Project Kickoff**

# WHAT IS THE FINAL PROJECT?

- The “final project” is a ComIT course requirement
- It is an open ended assignment where your only goal is to build and present a Python application that you have build.
- The application is intended to be a demonstration of your skills
- There are no marks or grades, it is a simple pass/fail

# WHAT ARE THE REQUIREMENTS?

- Your application must be written in Python
- You **should** use an existing Framework
- You **should** be able to connect to a database and save data (SQLite, Postgresql)
- Every person is different and has different skills. Your success will depend on how much you have learned, and how much effort you have put into the project.

# WHAT CAN WE BUILD?

- Python is capable of building:
  - Web Apps (Django, Flask)
  - Games (PyGame)
  - Desktop GUIs (Tkinter, PyQt)
  - Mobile Apps (Kivy)

# WHEN IS IT DUE?

- The final project presentations will take place on the last day of class.
- If you are unable to make it to class that day, a one on one presentation can be arranged with the project coordinator.
- There will be several (optional) milestones throughout the course. These exist to help you stay on track.

THE END

---

**QUESTIONS?**
